## Greetings

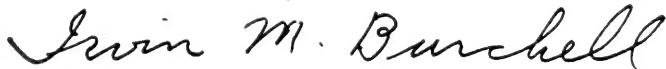

TO OUR FRIENDS AND CUSTOMERS!

As we start our sixteenth year in the same location on McHenry Avenue, we want to express our deep appreciation to the fruit growers of Stanislaus County, and the entire valley.

In building a sound, permanent nursery business, nothing is as important as choosing for associates men of character and integrity. We have been fortunate in this respect and the result has been a growing confidence in our organization over the years — which has been most gratifying.

As this little catalog goes to press, another crop of dependable trees is almost ready to dig and deliver. When planted in your orchard, wherever it may be, our interest in these trees does not end. When an orchard is planted, every grower eagerly anticipates healthy growth of the young trees — and then good production.

We share that anticipation; and a profitable orchard is our sincere wish for you.

Owner and Manager

LEONARD D. JAMES

Assistant Manager

ERNEST E. WAGGONER

Production Superintendent

LEE BRAND, Fresno District Representative

## TERMS OF SALE

**DELIVERY.** Our trucks run, during the planting season, throughout the San Joaquin and Sacramento Valleys. Truck deliveries are made without charge in this area. If necessary to ship your order by rail or motor express, we ship collect, and make no charge for packing. Growers are more than welcome to call and take delivery of their orders at our salesyard. Our shipping and delivery season runs from early in December until the last of March.

**QUALITY and CONDITION.** We take pride in growing and delivering quality nursery stock. However, if any defective trees or vines are found which may have escaped our graders; or if any stock arrives in defective condition, we ask you to notify us within ten days of receipt of shipment. We will then replace, or refund the purchase price of such defective trees or vines.

**TERMS and PRICES.** Terms are net cash. All prices in this catalog are subject to change without notice.

**INSPECTION.** California State Law provides that all nursery stock must be inspected by County Agricultural Commissioner at county of destination immediately upon receipt thereof. We guarantee our stock to pass inspection, and will stand any loss occasioned by its failure to do so.

**LIABILITY.** We use every care in the selection of budwood and the growing of nursery stock in order to have it true to name. We will replace, or refund the purchase price for any stock which may prove untrue. Our liability for this, however, or any other cause whatever, is limited to a sum no greater than the original purchase price.

## JUNE BUDS GROWN TO ORDER

If you expect to plant peaches or almonds in 1958, you can save money on your nursery stock by having it budded in June, 1957, especially to order. Orders should be placed by June 1st.

# **A NEW NECTARINE**

## **A NEW CLING PEACH**

### **A LATE BLOOMING ALMOND**

DESCRIBED ON THIS PAGE

#### **MARIGOLD**

*A Late Freestone Nectarine (See Front Cover)*

The Marigold nectarine is one of the most recent fruits developed by Mr. Fred W. Anderson of Merced County.

It is a yellow flesh freestone, ripening about the middle of August — approximately with Late LeGrand. The fruit is large, of fine color, and firm. Shipping nectarines of this type has proven highly profitable.

Last year we planted ten acres of Marigolds in our own orchards, and this year we offer trees for sale for the first time.

Ask us about our special introductory offer, which will make it unusually easy for you to plant the Marigold this year.

#### **SIERRA**

*A new Cling to Replace Peak and Paloro*

In 1949 Mr. Carl Miller of Escalon found a cling peach tree in his Elberta orchard. It was ready to pick when he was harvesting his Paloros, nearby. The next year he called it to our attention. We suggested that he have the fruit canned, and he sent samples to two different canneries. Both reported it to be of "good canning quality."

In 1952 we budded some trees in our nursery, as Mr. Miller was anxious to make a commercial planting. He planted these during the winter of 1952-53. These trees are now in bearing, and are starting out with fine production. The fruit on the original tree has always sized well.

Cling peach growers have long wanted a variety with all the good qualities of the Peak and Paloro, but which would resist mildew. In the Sierra we have an early midseason variety with reniform glands which does resist mildew, and we recommend it as a variety that will produce cleaner fruit with less spraying.

We are offering trees this year for the first time. The royalty is 10c per tree.

#### **TARDY NONPAREIL**

The Tardy Nonpareil originated about twelve years ago near Escalon, on the ranch of Mr. E. T. Sandall. It is a true bud sport, or mutation, of the Nonpareil. The nut is soft shell, and of good quality. The variety differs from the Nonpareil principally in blooming about ten days later — thus escaping spring frosts most years. It has been a good bearer on the Sandall Ranch, but trees in other locations have not yet come into bearing.

Plant Patent No. 1389 has been obtained by Mr. Sandall on this new almond. The royalty is 50c per tree.

## REGARDING BUDWOOD

For the past four years, the State Department of Agriculture has inspected the orchards from which we take budwood. This is done in order that we may be sure all budwood trees are free from serious virus diseases.

Such virus inspection is in addition to our own selection of heavy producing, true to type trees of each variety. We welcome inquiry about the bud source of any variety we grow.
